para la toma de decisiones  
UNED

# Declaration of Conflict of interest

To the best of my knowledge, I declare that I or any of my co-authors, and any of my/our close family members, have not had employment, received research support or other funding from, or had any other professional relationship with, an entity directly involved in the production, manufacture, distribution or sale of tobacco, tobacco products, weapons or arms, or have represented the interests of any such entities in any way.

I have no actual or potential conflict of interest in relation to this presentation.

# Contents

1. What is UNED
2. Our Team
3. Rapid and Living Evidence Synthesis
4. Evidence Informed Policy Process

# Unit of evidence and deliberations for decision making: UNED

We support the **decision making** of communities, patients (citizens), (health) professionals, organizations and decision makers using the **best available evidence** and **people's values and preferences**.

Our purpose is to contextualize evidence to support local decisions

- Patient decisions Aids
- Rapid synthesis (10 days, 30 days or 90 days)**
- Evidence Gap Maps
- Evidence briefs for policies**
- Citizen panels**
- Stakeholders and policy dialogues**
- Health technology assessments
- Clinical practice guides
- Evidence search services
- Teaching, continuing education
- Research

# Our team

## Dirección

Iván D. Flórez – Profesor, MD, MSc, PhD  
Daniel Felipe Patiño - Profesor, MD, MSc, PhD  
Marcela Vélez - Profesor, MD, MSc, PhD

## Area administrativa y financiera

## Área técnico-científica

### Administración de proyectos

Juan Carlos Velázquez

### Equipo de investigación

Pamela Velázquez, MD, MSc  
Silvia Villatoro, MD, MSc  
Viviana Vélez-Marín MD, MSc  
Isabel Cristina Marín, MD, MSc  
David García, Politólogo, MSc  
Duber Osorio, Odontólogo, MSc  
Ana María Pérez, MD

### Gestión documental y archivo

### Estudiantes

Claudia Lorena Ramírez MD  
Camila Rodríguez, MSc, PhD  
Nelia Palacio, GESIS

# Rapid Evidence Synthesis and Living Evidence Synthesis.

Synthesis developed in 7, 10, 30 or 90 days for different actors like: Colombian Ministry of Health, Ministry of Education, COVID-END, Public Health Agency of Canada.

**Public health surveillance programs, systems, and strategies to monitor the indirect population health impact attributable to the COVID-19 pandemic and the associated public health response measures.**

**A Rapid Scoping Review**

Date of Literature Search: 27 February 2023.  
Date of Submission: 30 March 2023.

Prepared By:  
Pamela Velásquez (PV)  
Laura Alejandra Mora Moreo (LM)  
Daniel Felipe Patiño (DFP)  
Andrea Tricco (AT)  
Iván D. Flórez (IF)

### COVID-19 Living Evidence Synthesis #8

What is the effectiveness of available COVID-19 vaccines for children and adolescents, including variants of concern?

A variant of concern is a variant for which there is evidence of an increased risk of spread, more severe disease (for example, causing more hospitalizations or deaths), lower capacity of antibodies generated as a result of infection by the virus or vaccination to block its actions, reduced success of treatments or vaccines, or failure of diagnostic tests to detect the virus. It is important to understand how COVID-19 variants of concern affect the virus' behaviour, including their impact on how well vaccines work among children and adolescents.

**How have we done this living evidence synthesis?**

- We conducted a broad search in several databases and websites to retrieve studies evaluating the effectiveness of COVID-19 vaccines, including the COVID-END Inventory of Evidence Syntheses.
- We examined the studies reporting data on how well vaccines work against variants of concern (more specifically, whether the vaccines prevent any infection, symptomatic infection, admission to the intensive care unit, severe disease, and death).
- We critically appraised the studies and determined the level of certainty of the body of evidence. The color indicates the level of certainty based on the evidence.

**Levels of certainty based on the best evidence available**

Low-certainty evidence: There are aspects of the studies that led us to believe the results may not be the same in future studies.

Moderate-certainty evidence: The studies were done with low to moderate risk of bias. The studies revealed only partially consistent findings.

High-certainty evidence: The studies were well done with low risk of bias. The studies revealed consistent findings.

**Vaccine effectiveness\*\* against Omicron**

Outcome (and vaccine)	Vaccine effectiveness (2 doses) up to 28 days after last dose		
	0-4 years	5-11 years	12-18 years
Any infection			
Pfizer	5%	26-70%	25-83%
Moderna	5%		55-78%
Symptomatic infection			
Pfizer	48-77%	59-83%	
Admission to the intensive care unit			
Pfizer	21%		
Severe disease (may include death in some studies)			
Pfizer	41-94%	76%	
Death			
No evidence available			

The COVID-19 Evidence Network to support Decision-making (COVID-END) is supported by an investment from the Government of Canada through the Canadian Institutes of Health Research (CIHR). To help Canadian decision-makers as they respond to unprecedented challenges related to the COVID-19 pandemic, COVID-END in Canada is preparing rapid-evidence responses like this one. The opinions, results, and conclusions are those of the evidence-synthesis team that prepared the rapid response, and are independent of the Government of Canada and CIHR. No endorsement by the Government of Canada or CIHR is intended or should be inferred.

We are conducting 13 rapid synthesis to support the National Demographic and Health Survey

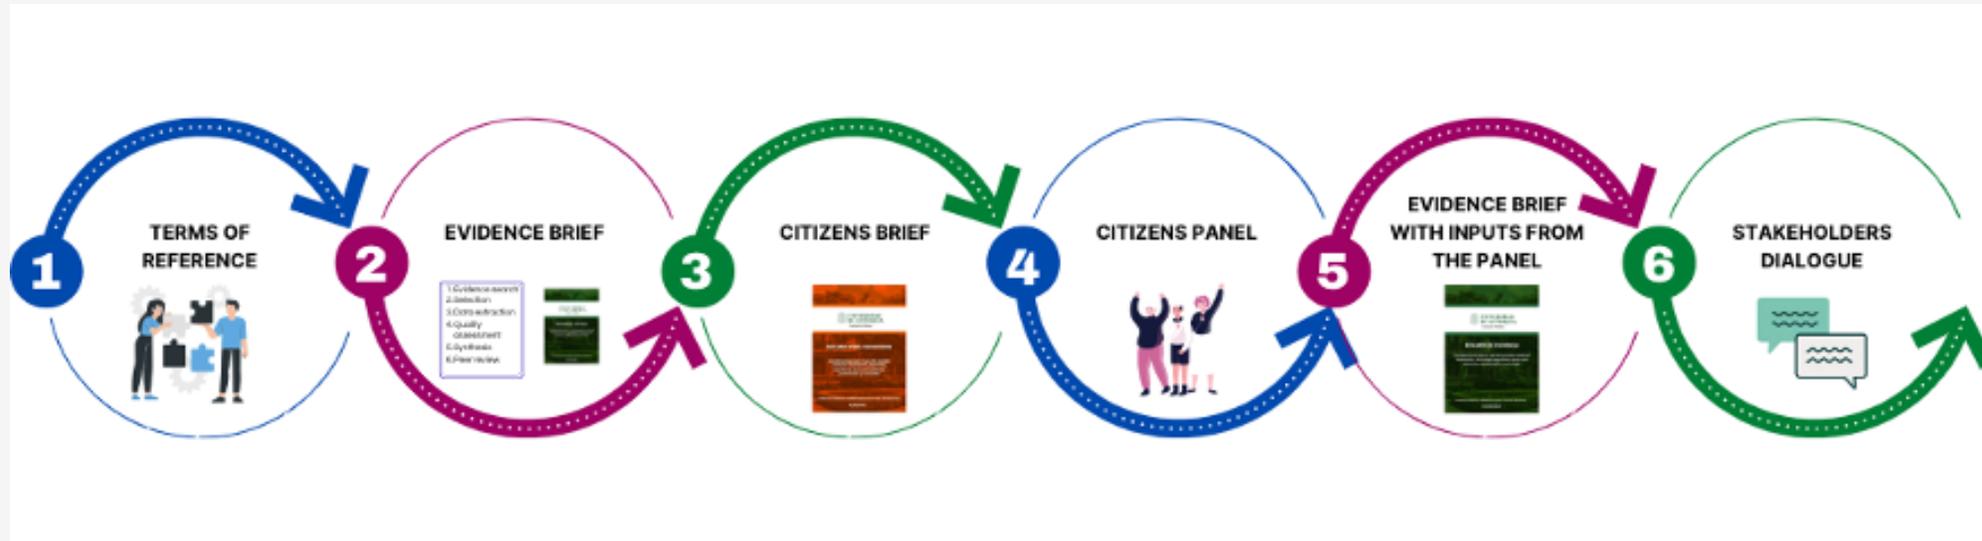

Unidad de Evidencia y Deliberación para la toma de decisiones UNED

Up to date evidence to inform real world decisions

# Evidence informed policy process

Evidence combined with citizens preferences and stakeholder´s views and experiences to inform policies in Colombia around: **Medical Cannabis, Antimicrobial Resistance and uses of Psychoactive plants**

**Global Evidence Summit**

**Thank you  
Gracias!!**

Using evidence. Improving lives.
